

Installing SSL Certs to vCenter / vROPs

Combine fullchain with the regular cert (name of regular cert is same as domain name) as machine SSL cert - should have 3 certs total. Regular cert up top, followed by fullchain.

Use fullchain (just fullchain) as the chain certificate

Use private key file as key

For vROPs, follow same procedure. MAKE SURE CERTS ARE IN CORRECT ORDER

vrops.crt

privkey.key

fullchain
